

4.5 Exercise

This is a recommended exercise for you to work through in order to practically apply what you have learned in this Module.

Look at the activities you estimated and determine what their relationships would be if you were to use them to create a schedule. Decide which activity should occur first, what happens next, can any of the work occur in parallel? And for each consider what the relationship should be between them, is it finish-start, finish-finish, start-start?
