

- 0:00 [MUSIC] Hi, in this video I will explain how to use a rubric for evaluating your course project artefact and grading rubric is a grading guide that explains the expectations of your work and informs you of how your performance in the project will be judged. It consists of three major accounts, criteria, ratings, and your points.
- 0:27 Criteria are linked to the learning outcome. Each row speaks to certain expectations of your project art effect.
- 0:35 The ratings category consists of three possible ratings that you could earn as you achieve a certain standard of quality. It describes what is expected of you in order to score the associated points.
- 0:47 The last category is your points. It is a place to write down your score as you evaluate your work against each criterion in order to grade your final artifact, reflect on each criterion and select a level of performance you think you have achieved.
- 1:03 I encourage you to be objective and honest with yourself. As the only person you will cheat by giving yourself a high grade is yourself. Add all points across each row to arrive at your final score. Compare a score against the grading scale matrix to determine your final grade.
- 1:23 This exercise presents an opportunity to not only evaluate your work, but also to reflect on what you did great, and also what you could do better next time around.
- 1:34 Are there any components of the artifact that you feel less confident about?
- 1:39 Write those down and revise the material in previous courses as needed. I will leave you with a quote by Steven Covey. Be patient with yourself. Self-growth is tender. It's holy ground. There's no greater investment. I'll see you around.
