3.5 Exercise

This is a recommended exercise for you to work through in order to practically apply what you have learned in this Module.

For the project that you have been using in our previous activities, identify at least three significant risks that you think the project faces. For each risk determine how likely you think it is to occur (the probability) and the impact if it does occur. Create your own scoring system for probability and impact. You might use High-Medium-Low; you might use numeric values or you might use percentages. Define a response for each of these risks.
